

Table of Contents to the first book in the Don't Lobotomize the Horse-series; A Science-Based Guide to Equine Psychology, Understanding Horse Behavior, and Biological Needs - While Building Unshakeable Trust

This is more of a narrative listing of the chapters, since there are so many of them, but you get a sense of what the book covers and what to expect when you by it 😊

- Introduction: Looking at the World Through Your Horse's Eyes
- Chapter 1: The Equine Brain and Nervous System
 - Understanding Neurological Responses
 - The Science of Fight-or-Flight vs. Calmsense
 - How Chronic Stress Impacts Behavior
- Chapter 2: Sensory Perception — How Horses Experience Reality
 - Vision: Seeing Beyond the Blind Spots
 - Hearing and Touch: Decoding Subtle Environmental Cues
 - How Sensory Overload Triggers Spooking
- Chapter 3: Biological and Natural Needs
 - The Evolutionary Reality of the Modern Horse
 - Movement, Foraging, and Mental Stimulation
 - Bridging the Gap Between Traditional Stalls and Natural Keeping
- Chapter 4: Herd Dynamics and Social Structure
 - The Psychology of the Herd
 - Why Isolation Affects Emotional Balance
 - Creating Safe Social Environments for Domestic Horses
- Chapter 5: Communication and Body Language
 - Reading the Silent Signals
 - Misunderstood Behaviors: Stubbornness vs. Anxiety
 - Responding with Empathy Over Force
- Chapter 6: Building an Unshakeable Foundation of Trust
 - Becoming a Source of Absolute Safety
 - Practical Steps for Gentle Handling and Connection
 - Moving Forward Together
